

# AVERAGE DAILY USAGE CALCULATION SHEET

## Water/Sewer Impact Fees

Property or Project: \_\_\_\_\_

Address/Location: \_\_\_\_\_

### FEE CALCULATION WORKSHEET

Data: Average daily water usage of proposed use (GPD) \_\_\_\_\_ = ADU

Water Impact Fee	6.96 per water GPD
Sewer Impact Fee	4.89 per sewerage GPD

### Impact Fee Calculation:

Water Impact Fee            ADU x 6.96    =            \$ \_\_\_\_\_

Sewer Impact Fee            ADU x 4.89    =            \$ \_\_\_\_\_

TOTAL WATER/SEWER IMPACT FEE    =            \$ \_\_\_\_\_

Check box if above calculations are ESTIMATED – See Notes below.

### NOTES:

1. For water or sewer impact fees calculated on the basis of the average gallon per day usage instead of the Impact Fee Schedule (Ex. B), the applicant shall present credible evidence prepared, certified and sealed by a knowledgeable Professional Engineer (PE) registered in the State of Georgia and acceptable to the City, or other person acceptable to the City, regarding the projected water usage of the proposed use. Such evidence shall be based on other similar uses, historical water usage by the same type of use, engineering calculations based on accepted standards and practices or other data that is acceptable to the City.
2. The payment of an impact fee calculated on the basis of average daily usage may be accepted by the City as a conditional payment pending actual water usage experienced by the use over a twelve-month period of full operation or occupancy.
